Procedures for Configuring
Firewalls to access
The Naval Year 2000
Tracking System (NY2KTS)

A.   The firewall team on your end needs to make sure the following IP Addresses and ports are configured within their Firewall parameters.

URL	IP ADDRESS	PORT
ny2kts.navair.navy.mil	140.229.36.167	80 and 9000
corp-nt24.nawcad.navy.mil	140.229.36.166	80 and 9000

This will assure the proper ports are created to link to the correct IP Addresses.

B.   The following procedures must be performed on the user's PC. These instructions require the user to be able to modify their desktop environment. If you do not have these privileges you will need to contact your desktop solutions or network group. These procedures only have to be performed one time on each of the users PC's.

1. Go to the Start Menu

2. Select Settings

3. Select Control Panel

4. Double click on the Network Icon.

5. Select the TCP/IP Protocol adapter, and click the Properties Button

6. Select the DNS Configuration Tab

7. In the Domain Suffix Search Order field, enter *nawcad.navy.mil* and depress the Add Button.

8. Once you add the entry, select the OK Button, then select the OK Button on the previous window. At this point it may start loading a change to the device driver, and you may be required to re-boot your PC.

9. Once the drivers are reconfigured (and/or the PC re-boots) you will be able to try to connect to the Navy's Year 2000 Tracking System (NY2KTS).

C.   If you have problems connecting to the NY2KTS System after following these instructions please contact the Help Desk at (301) 342-3104, (888) 292-5919, or on the web at http://calltracker.nawcad.navy.mil.
